Every second counts.

Gen AI accelerates research and testing across global healthcare group.

70% faster insights **+Safer** outcomes for patients

40% more accurate validation

A global healthcare leader applied Gen AI across research, engineering, and care to strengthen the foundations of modern medicine. With secure, domain-led Gen AI, the organization built a governed Gen AI framework that connects development and delivery units under a single, trusted model.

The first deployment, Smart Briefing, transformed how policy and medical teams prepare complex reports, reducing prep time by 70% and upping accuracy by 60%.

A Smart QA platform for MedTech increased test reliability by 40% and accelerated validation cycles. Lifecycle AI Search gave engineers instant access to verified design knowledge. At the clinical edge, SmartPump introduced real-time calibration and data capture in surgical care.

With governed Gen AI now embedded across its operations, the company delivers faster, traceable intelligence that strengthens every stage of global healthcare:

- Regulators receive timely, accurate data
- Clinicians gain confidence in every instrument and procedure
- Patients benefit from safer, better-tested innovations reaching them sooner

It’s a strong use case for data with a duty of care.
